

Today sta

rted like any other day. We went to school at 9 o'clock. When everyone had arrived we went to the University by foot.

At the science department of the University we got a lecture about hydrogen and it benefits as an energy resource. At the lecture we saw how water is

electrolyzed to hydrogen and oxygen. At the lecture we got to try a special bike which when we peddled it we created energy. We also gat to look around at the science stuff at the University e.g. we saw the colour scale of hydrogen.

After we had seen the University we had some free time to go and get something to eat and have a closer look at the town.

We arrived to school at 13.30 started to finish our project from the day before. We created a car out of rubbish.

When we had done that we went by bus to the Hill Of Crosses. That was really amazing. You should have seen all those crosses they are not hundred, not thousands, but millions. It was really amazing.

We saw cows on our way back, but there were only two. We also got a change to look at the landscape.

Today we had a lot of fun and the weather was really good.
Viso gero Egill
